Infotrieve Launches New Features for Mobile Library™

- Enhancements Available on Web-Based Browser and iPad App -

WILTON, CT –January 30, 2012 – Infotrieve, Inc. (www.infotrieve.com), the global leader in e-content business service solutions, today announced a new release of its cloud-based Mobile Library™, updated with an improved search function, additional features for Personal & Shared Libraries and general user interface enhancements. This new release also integrates the Mobile Library with Infotrieve's BRAVO™, a web-based aggregation platform that simplifies bulk ordering of reprints and eprints.

"Infotrieve continuously works to enrich our product and service offerings to anticipate the needs of our clients," said Ken Benvenuto, President and Chief Executive Officer of Infotrieve. "This latest release exemplifies one of the key advantages of Infotrieve's cloud-based architecture in providing us the flexibility to rapidly add additional capabilities to our software that address the evolving business requirements of our business partners."

Mobile Library's new features include: an enhanced search interface with additional flexibility for ranking results, and the addition of an auto-complete feature; new functionality in the Personal & Shared Library Suite including a dashboard showing recent changes to the library, discussion pages in each library for general comments, user creation and management of shared libraries, and enhanced administrative controls; and updates to the Browsed Holdings

feature including improved filtering, copyright permissions ordering and compact citation display.

Infotrieve's Mobile Library offers fully secure, cloud-based anywhere, anytime access to enterprise e-content, along with instant access to a world of knowledge on a pay-per-view basis. Leveraging Infotrieve's "borderless office" technology, users can seamlessly switch between their PC, Mac or iPad™ without skipping a beat, as their workspace is automatically synchronized across devices. As a flexible e-content software solution, the Mobile Library can serve a variety of customer needs, from easy searching and ordering of pay-per-view content, to a comprehensive rights management solution integrated with shared libraries and social features.

Mobile Library is Infotrieve's award-winning content access and management solution that has more than 325,000 users from 6,500 organizations in over 80 countries. The Mobile Library platform was initially launched as Content SCM® in November 2008. The Mobile Library iPad app was first released in September 2010 and the entire platform was renamed Mobile Library as part of a branding update in October 2011.
